miscribe Blog in the shape of a social networking is a type of digital content that encompasses blogs and social media. In short, a blog is a site on which you can share your thoughts and ideas to your readers. A social media is a network that is designed to facilitate the communication between users on the Internet. In this article, we are going to look at the advantages and disadvantages of each type of blog and social media. 1. Advantages of Social Media Web 2.0 is a term used to describe the advanced functions of Internet services that engage the people who use it. Web 2.0 allows people to share their opinions, feelings and ideas to others online. One of these web services is social media. In a nutshell, a social media enables you to share your thoughts, feelings and ideas with your friends, relatives, classmates or colleagues on the Internet. There are many types of social media, but some of the most popular ones are Facebook, Twitter and LinkedIn. 1.1. What is Facebook? Facebook is the most popular social media in the world and it has more than 1.2 billion monthly active users. Facebook was first launched in February 2004 and the last update on the social network was conducted on December 17, 2011. According to the company's own figures, the number of users had tripled since 2006. The number of Facebook users in the United States increased from 50 million in 2007 to over 80 million in 2010. In 2009, it became the most used social media in the world. Facebook generated over \$3 billion in revenue in 2011. If you take into consideration the number of people who use the social network and the amount of money generated from it, you will realize that Facebook is a big business. The website claims that the average user spends six hours a day on it. Another interesting fact about Facebook is that it claims that people share more than 100 pieces of information on the social network every day. According to the statistic, users post more than 110 million status updates each day. 1.2. What is Twitter? Twitter is a microblogging platform. It is a real-time social network that is used to send short messages to other users called Tweets. Users can send Tweets in 140 characters or less. It is possible to send Tweets through the mobile devices and you can also access the social network through the website and mobile apps. One of the interesting facts about Twitter 82157476af
